Executive summary

Over the reporting period, Fancentro has continued to advance its commitment to digital accessibility, guided by the principles of inclusivity, compliance, and continuous improvement. This Accessibility Progress Report outlines the current status of accessibility across our user-facing web and mobile platforms, our main achievements during the reporting period, and our ongoing efforts to meet the requirements of the European Accessibility Act (Directive (EU) 2019/882).

This report applies to Aylo Social Ltd public-facing platforms within the European Union, including websites, mobile applications, and web-based services related to video streaming and digital subscriptions.

It does not apply to internal enterprise systems, corporate facilities, or non-consumer-facing communication channels.

Declaration of Accessibility

Fancentro continues to work towards full compliance with the European Accessibility Act and applicable harmonized standards such as the Web Content Accessibility Guidelines (WCAG) 2.1, Level AA.

After the reporting period of this progress report, our platforms are: Partially Compliant

Our overall status is currently 'In Progress' as significant enhancements have been implemented, with continuous improvements underway.

We are continuing to address identified accessibility issues through targeted product updates, testing efforts, and internal training.

Main Achievements – Accessibility Features

Throughout the reporting period, Fancentro achieved impactful and noticeable progress.

Efforts were focused on the features outlined in our initial Accessibility Statement while also incorporating feedback received through the accessibility webform to ensure both strategic and user-informed alignment. Notably, 24% of the feedback submissions we received were related to navigation challenges, guiding our prioritization of these enhancements.

- **Keyboard Accessibility:** Many of our webpages, menus, modals, and checkout flows are now navigable using only a keyboard. We have ensured that keyboard focus is visually indicated, enhancing the browsing experience for users who do not use a mouse. We also

ensured that all form fields have valid labels, enabling a seamless and intuitive interaction with forms.

- **Screen Reader Compatibility:** Enhancements include the following features:
 - **Alternative Text:** We have implemented alternative text for images, icons, and controls critical in user interaction, ensuring visually impaired users receive necessary context for navigating and understanding site content.
 - **ARIA Labels for Dynamic Content:** Dynamic content areas now utilize ARIA labels to convey important updates, relaying real-time information to users employing screen readers. This structure allows instant awareness of changes or notifications as they occur, enhancing user engagement and interaction.
 - **Heading Hierarchy:** Our websites now boast a refined heading hierarchy, logically ordered to optimize navigation. This hierarchical structuring aids users, especially those using screen readers, providing a straightforward path through content and ensuring consistency and clarity in information delivery.
- **Closed Captions:** Accounting for approximately 20% of the feedback received, we have thoroughly reviewed captioning accessibility and are developing a standardized approach that accommodates varying video players and systems. Implementation is in progress, with the goal of ensuring accurate, consistent, and inclusive captioning for all video content.
- **Staff training:** We implemented comprehensive accessibility training programs that cater to both customer support representatives and engineering staff. For customer support, the training focused on effective communication strategies and understanding the diverse needs of customers with disabilities, ensuring a higher standard of service. For our engineering and software development teams, training was designed to emphasize the importance of prioritizing accessibility during the design and development phases of new features. Training completion rate reached 100% across both customer support and engineering teams, demonstrating strong organizational commitment to accessibility.

Additionally, accessibility training has been integrated into our onboarding process to nurture an inclusive workplace culture from the outset. This holistic approach ensures that accessibility is embedded across all levels of our organization's operations.

- **Service Agreements:** To ensure all procured goods and services meet accessibility standards, we revised our vendor contracts to explicitly state adherence to WCAG 2.1/2.2 AA criteria. This includes providing clear accessibility guidelines to potential vendors, requiring detailed documentation on their compliance processes, and establishing regular checkpoints for assessment and feedback.

Known Limitations

While notable progress has been made, several areas remain targeted for enhancement:

- Closed caption standardization
- Audio descriptions for video content
- Screen-reader and keyboard navigation refinement
- Consistency across dynamic content announcements

Target date for enhancements: June 2027

Testing Completed

Accessibility reviews were conducted using a combination of manual and automated assessments, supported by user testing and structured feedback analysis. Testing methods included

- Internal accessibility audits, incorporating the use of automated scanning tools for initial analysis and issue identification
- Manual keyboard-only navigation testing encompassing modals, interactive webforms, menus, and transactional processes
- Comprehensive review of accessibility-related user feedback to inform ongoing improvements

Feedback and Support

We continue to encourage users to notify us of any accessibility barriers they encounter or adjustments they may require to access content effectively. Feedback is critical to our improvement processes and treated confidentially and respectfully.

Since publication of the Initial Plan, Fancentro has received **27 feedback submissions**. The majority of feedback was related to:

- website navigation
- screen-reader compatibility
- improperly labeled elements
- closed captions
- audio descriptions

You can provide feedback or request alternative content through any of the following channels:

Email: accessibilityfeedback@fancentro.com

Webform: Available through the “Accessibility” footer link on each platform:

<https://support.fancentro.com/accessibility>

Response time: We aim to address all accessibility-related queries and support requests within 14 business days.

Complaint and Escalation Procedure

If you are unsatisfied with our response to an accessibility request or concern, you may submit a formal complaint to the regulatory enforcement body designated in your country under the European Accessibility Act.
